Dear Chairman Collins, Ranking Member Reed, Chairman Diaz-Balart, and Ranking Member Price:

The undersigned represent the Rail Customer Coalition (RCC), a large and diverse group of trade associations and businesses from the manufacturing, distribution, energy and agricultural industries that depend on reliable and affordable rail service to do business in the United States. As the House and Senate begin work on their respective FY 2017 THUD bills, we are writing to support additional funding for the Surface Transportation Board (STB or Board) in the appropriations process to help ensure that the Board has adequate resources to meet its statutory mission.

The STB is responsible for the economic oversight of the entire freight rail industry, which involves not only large and resource-intensive rate cases, but hundreds of smaller decisions and actions. The STB was reauthorized by Congress last year for the first time in 20 years, when Public Law 114-110, The Surface Transportation Board Reauthorization Act of 2015, was signed into law on December 19, 2015. This law recognized the need for the STB to become a more efficient and effective body. Chairman Shuster noted that the reforms were included to “allow the STB to run more efficiently… it is going to get these rate [cases] to the STB faster and get us through that process quicker. That is extremely important.” Given the new requirements and new responsibilities the Board will now assume, including the addition of two new Board members, it is imperative that this small but important agency is funded at least to the very modest levels authorized under the new law.

Key proceedings before the STB on rules have moved at a glacial pace – not advancing to a proposed rulemaking after nearly 5 years – due in part to resource constraints as the Board considers extensive data and comments provided by stakeholders. The STB is the only venue for
rail customers to seek resolution of rate and service issues and, unfortunately, many rail customers will not go to the STB because history has shown that their issues will not be dealt with in a timely fashion.

At a Transportation and Infrastructure Committee hearing last year, STB Board Member Deb Miller highlighted an issue that has long concerned many members of the RCC. The STB computer system is antiquated to the point where the system engineers can no longer provide many services. The STB website is also inadequate, largely due to constraints presented by outdated computer networks. We support additional funding to support upgrades that would enhance the efficiency of the agency. The STB must have adequate staff and resources to meet its statutory mission.

The RCC members support additional funding for the Board in the Appropriations process, and look forward to working with the Committees to find solutions to the challenges faced by the Board.

Sincerely,
